The peasy-todo package
v1.0

Pietro Brach del Prever

2026/10/14

Abstract

peasy-todo adds numbered, highlighted to-do and done notes to a document and collects them in a list of to-dos. It is a modified version of easy-todo by Juan Rada-Vilela.

ToDo

P.

1. Add the missing figure. 1
2. A note that shows only in the list. 1
3. Fix the caption. 1
4. A longer entry for the list. 1

1 Usage

Load the package in the preamble:

```
\usepackage[<options>]{peasy-todo}
```

1.1 Commands

\todo{*note*} Prints a numbered red note and adds it to the list of to-dos. Example: **1. Add the missing figure.**

\todoi{*note*} Prints only the number and adds the note to the list. Example: **2.**

\done{*note*} Prints a numbered blue note and adds it to the list. Example: **3. Fix the caption.**

\todoii[*color*]{*note*}{*list entry*} The general form. The note and the list entry can differ. The color defaults to red. Example: **4. Short note.**

\listoftodos Prints the list of to-dos.

The notes use soul for the highlight. Thus a note cannot contain commands that soul does not accept, for example `\gls` from glossaries.

1.2 Options

`enable` Shows the notes and the list (default).

`disable` Hides the notes and the list.

`obeyFinal` Hides the notes and the list when the document class gets the `final` option.

`section` Gives the list a `\section*` heading (default).

`chapter` Gives the list a `\chapter*` heading.

The commands `\todoenable{true|false}`, `\todoobeyfinal{true|false}`, and `\todoindexas{section|chapter}` set the same values in the document body.

1.3 Customization

Redefine `\todoindextitle` (default `ToDo`) to change the list heading. Redefine `\todoindexpagetitle` (default `P.`) to change the page column heading. Redefine `\todocolor` (default `\color{red}`) to change the list color.

2 Dependencies

color, tocloft, ifthen, ifdraft, and soul.
